DTSU666 series three phase four wire electronic energy meter (Din-rail)

DSSU666 series three phase three wire electronic energy meter (Din-rail)

Manual

ZTY0.464.1002

Zhejiang Chint Instrument & Meter Co., Ltd.

June , 2019

Catalog

1. Brief Introduction

1.1. Main application & applicable range

    DTSU666 series three phase four wire and DSSU666 series three phase three wire electronic energy meter (din-rail) (hereinafter referred to as the "instrument") is designed based on power monitoring and energy metering demands for electric power system, communication industry, construction industry, etc. as a new generation of intelligent instrument combining measurement and communication function, mainly applied into the measurement and display for the electric parameters in the electric circuit including three voltage, three current, active power, reactive power, frequency, positive& negative energy, four-quadrant energy, etc. Adopting the standard DIN35mm din rail mounting and modular design, it is characterized with small volume, easy installation and easy networking, widely applied into the internal energy monitoring and assessment for industrial and mining enterprises, hotels, schools, large public buildings.

    Complied standards:

    IEC 61010-1:2010《Safety requirements for electrical equipment for measurement，control and laboratory use Part1:General requirements》

    IEC 61326-1:2013 《Electrical equipment for measurement，control and laboratory use –EMC requirements Part1:General requirements》

1.2. Product Features

    1) Characterized with positive and reverse active power, combined active power, combined reactive power, four quadrant reactive power metering and storage function with combination mode character can be set.

2) RS485 communication interface, easy to exchange data with outside;

3) Adopting the standard DIN35mm din rail mounting and modular design, it is characterized with small volume, easy installation and easy networking.

1.3. Product　Model

Table 1 product model and specification

Model	voltage （V）	Current （A）	Impulse constant		Accuracy class
			imp/kWh	imp/kvarh	
DTSU666	3×230/400	1.5(6)A	6400	6400	Active Class 0.5S, Reactive Class 2
		5(80)A	400	400	Active Class 1, Reactive Class 2
DSSU666	3×400	1.5(6)A	6400	6400	Active Class 0.5S, Reactive Class 2
		5(80)A	400	400	Active Class 1, Reactive Class 2

Note：1.5(6)A　is Connection through current transformers, 5(80)A is direct access.

1.4. Temperature range

Regulated working temperature range: -10℃～+45℃；

Limited working temperature range: -25℃～+75℃；

Relative humidity(Annually average):≤75％；

Atmospheric pressure: 63.0kPa～106.0kPa(altitude 4km and below), excepting the requirements for special orders.

2. Working Principle

2.1. Working Principle

　The instrument are composed of high accurately integrated circuit specially for measurement (ASIC) and managing MCU, memory chip, RS485 communication module, etc.
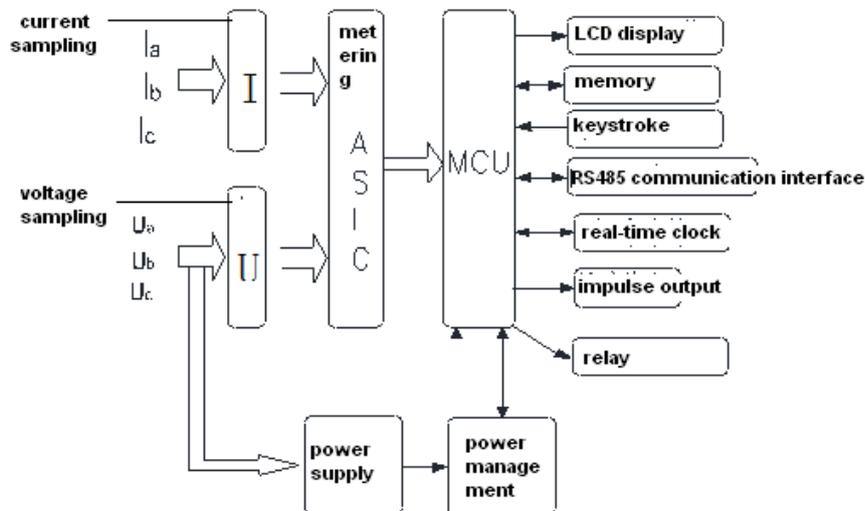

Figure 1 Working principle block diagramFigure 1

2.2. Principle for the main function module

The special metering integrated circuit (ASIC) integrated six load two order $\sum$-$\triangle$ type of A/D conversion, please take the digital signal processing measured by the voltage circuit as well as all the power, energy, effective values, power factor and frequency. This metering chip can measure the active power, reactive power, apparent power, active energy, reactive power, apparent energy of each phase and combined phase, and at the same time measuring current, voltage effective values, power factor, phase angle, frequency and other parameters, entirely satisfying the needs of power meter. The chip provides an SPI interface, convenient for metering parameters as well as parameter calibration between the management MCU.

3. Main Technical Performance & Parameters

3.1. limit of error caused by the current augment

Table 2 The limit value of the active percentage error of meters on balanced load

Meters for	Value of current	Power factor	Percentage error limits for meters of class		
			0.5S	Class 1	Class 2
Connection through current transformers	$0.01I_n{\leq}I{<}0.05I_n$	1	±1.0	±1.5	±2.0
	$0.05I_n{\leq}I{\leq}I_{max}$	1	±0.5	±1.0	±1.2
	$0.02I_n{\leq}I{<}0.1I_n$	0.5L、0.8C	±1.0	±1.5	±2.0
	$0.1I_n{\leq}I{\leq}I_{max}$	0.5L、0.8C	±1.0	±1.0	±1.2

Direct connection	$0.05I_b \leq I < 0.1I_b$	1	-	±1.5	±2.0
	$0.1I_b \leq I \leq I_{max}$	1	-	±1.0	±1.2
	$0.01I_b \leq I < 0.2I_b$	0.5L、0.8C	-	±1.5	±2.0
	$0.2I_b \leq I \leq I_{max}$	0.5L、0.8C	-	±1.0	±1.2
Note	In：secondary rated current of the current transformer; Ib：calibrated current of the meter; L:inductive；C：capacitive；				

Table 3 The limit value of the reactive percentage error of meters on balanced load

Value of current		sinφ（inductive or capacitive ）	Percentage error limits for meters of class
Direct connection	Connection through current transformers		Class 2
$0.05I_b \leq I < 0.1I_b$	$0.02I_n \leq I < 0.05I_n$	1	±2.5
$0.1I_b \leq I \leq I_{max}$	$0.05I_n \leq I \leq I_{max}$	1	±2.0
$0.1I_b \leq I < 0.2I_b$	$0.05I_n \leq I < 0.1I_n$	0.5	±2.5
$0.2I_b \leq I \leq I_{max}$	$0.1I_n \leq I \leq I_{max}$	0.5	±2.0
$0.2I_b \leq I \leq I_{max}$	$0.1I_n \leq I \leq I_{max}$	0.25	±2.5

Table 4 The limit value of the reactive percentage error of meters on balanced load

Value of current		Power factor	Percentage error limits for meters of class		
Direct connection	Connection through		0.5S	Class 1	Class 2
$0.1 I_b \leq I \leq I_{max}$	$0.05I_n \leq I \leq I_{max}$	1	±0.6	±2.0	±3.0
$0.2I_b \leq I \leq I_{max}$	$0.1I_n \leq I \leq I_{max}$	0.5L	±1.0	±2.0	±3.0

Table 5 The limit value of the reactive percentage error of meters on imbalanced load

Value of current		Power factor	Percentage error limits for meters of class
Direct connection	Direct connection		Class 2
$0.1 I_b \leq I \leq I_{max}$	$0.05I_n \leq I \leq I_{max}$	1	±3.0
$0.2I_b \leq I \leq I_{max}$	$0.1I_n \leq I \leq I_{max}$	0.5	±3.0

3.2. Starting and no-load condition

3.2.1. Starting

Under the power factor of 1.0 and started current, the instrument can be started and continuously measure (for multiple phase instrument, it will bring balanced load). If the instrument is designed based on measurement for dual directional energy, then it is applicable for each direction of energy.

Table 6 start current

Meters for	Class of meter			Power factor
	0.5S	1	2	
Direct connection	-	$0.004I_b$	$0.005I_b$	1
Connection through current transformers	$0.001I_b$	$0.002I_b$	$0.003I_b$	1

3.2.2. Test of no-load condition

When the voltage is applied with no current flowing in the current circuit, the test output of the meter shall not produce more than one pulse.

For this test, the current circuit shall be open-circuit and a voltage of 115 % of the reference voltage shall be applied to the voltage circuits.

The minimum test period Δt shall be

$$\Delta t \geq \frac{600 \times 10^6}{k \cdot m \cdot U_n \cdot I_{max}} \, [min]$$ for meters of class 0.5S or 1

$$\Delta t \geq \frac{480 \times 10^6}{k \cdot m \cdot U_n \cdot I_{max}} \, [min]$$ for meters of class 2

k is the number of pulses emitted by the output device of the meter per kilovarhour(imp/kvar·h);
m is the number of measuring elements;
Un is the reference voltage in volts;
Imax is the maximum current in amperes.

3.3. Electrical parameters

Table 7 Electrical parameters

Regulated operating voltage range	0.9Un～1.1Un	
Extended operating voltage range	0.8Un～1.15Un	
Power consumption of voltage	≤1.5W 和 6VA	
Power consumption of current	Ib＜10A	≤0.2VA
	Ib≥10A	≤0.4VA
Data storage time after power interruption	≥10 years	

4. Main function

4.1. Displayed function

From the displayed interface, the electrical parameter and energy data are all primary side data (that is, the multiplied by current and voltage ratios). The energy measuring value will be displayed seven bits, with the displaying range from 0.00kWh to 9999999MWh.

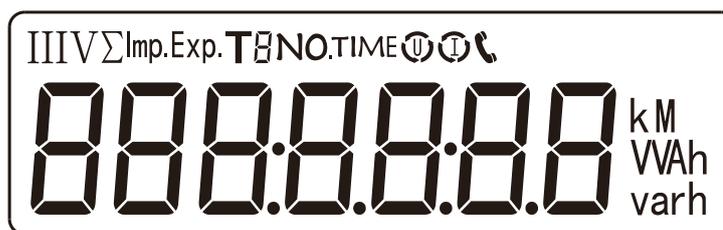

Figure 2 display

Table 8 Display interface

No.	Display interface	Instruction	No.	Display interface	Instruction
1	Σ 1000000 kWh	Combined active energy =10000.00kWh	11	Ib 5.001 A	Phase B current =5.001A
2	Imp. 1000000 kWh	Positive active energy =10000.00kWh	12	IC 5.002 A	Phase C current =5.002A
3	Exp. 2345.67 kWh	Reserve active energy =2345.67kWh	13	Pt 3.291 kW	Combined phase active power =3.291kW
4	NO. H000000	Protocol: DT/L645-2007 address = 000000000001	14	PA 1.090 kW	Phase A active power =1.090kW
5	NO. L000001		15	Pb 1.101 kW	Phase B active power =1.101kW

6	n 1-9.600	Protocol: MdoBus-RTU; address =001 Baudrate=9600 None parity, 2 stop bits	16	PC 1.100 kW	Phase C active power =1.100kW
7	----001		17	Ft 0.500	Combined phase power factor PFt=0.500
8	UA 220.0 v	Phase A voltage =220.0V	18	FA 1.000	phase A power factor PFt=1.000
9	Ub 220.1 v	Phase B voltage =220.1V	19	Fb 0.500	Phase B power factor PFt=1.000
10	UC 220.2 v	Phase C voltage =220.20V	20	FC-0.500	phase A power factor PFt=-0.500

NOTE：Combined active energy = Positive active energy - Reserve active energy。

4.2. Programming function

4.2.1. Programming function

Table 9 Programming Parameter

Parameter	Value range	Description
Ct	1~9999	Current ratio, used for setting the input loop current ratio: When the current is connected to the line via the transformer, Ct=the rated current of the primary loop / the rated current of the secondary circuit; When the current is directly connected to the line, Ct shall be set as 1.
Pt	0.1~999.9	Voltage ratio, used for setting the voltage ratio of the input loop; When the voltage is connected to the line via the transformer, Pt= the rated voltage of the primary loop / the rated voltage of the secondary circuit; When the voltage is directly connected to the line, Pt shall be set as 1.0.
Prot	1：645;	Settings for communication stop bit and Parity bits：

	2：n.2; 3：n.1; 4：E.1; 5：O.1;	1：Factory mode； 2: None parity, 2 stop bits, n.2; 3: None parity, 1 stop bit, n.1; 4: Even parity, 1 stop bit, E.1; 5: Odd　parity, 1 stop bit, O.1;
bAud	0：1.200; 1：2.400; 2：4.800; 3：9.600;	Communication baud rate： 0：1.200 bps； 1：2.400 bps； 2：4.800 bps； 3：9.600 bps；
Addr	1～247	Communication address
nEt	0：n.34; 1：n.33;	Option for wiring mode: 0：n.34 represents three phase four wire; 1：n.33 represents three phase three wire.
CLrE	0:no； 1:E	The setting is 1, representing the allowed instrument energy data clearance, which will be zero reset after clearing.
PLuS	0:P； 1:Q; 2:S;	Pulse output: 0：active energy pulse; 1: reactive energy pulse; 2：Others.
d ISP	0～30	Display in turns(second) 0：Timely display；　　　1～30：Time interval of actual display.
bLCd	0～30	Backlight lighting time control（minutes） 0：Normally light；　　1～30：backlight lighting time without button operation

4.2.2. Programming operation

　　Button description: "SET" button represents "confirmation", or "cursor shift" (when input digits),

"ESC" button represents "exit", "→" (" ") button represents "add". The input code is (default 701).
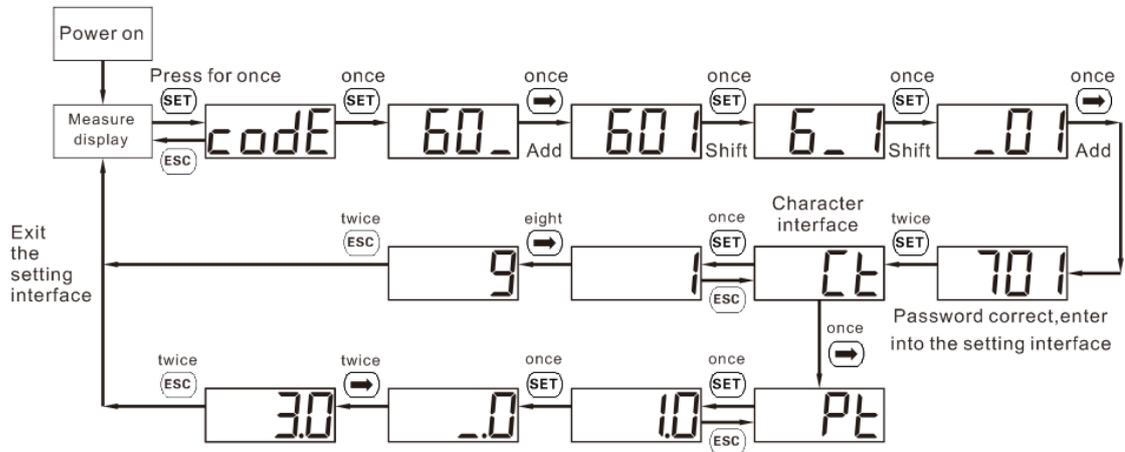

Figure 3 Setting examples for current and potential transformer ratio
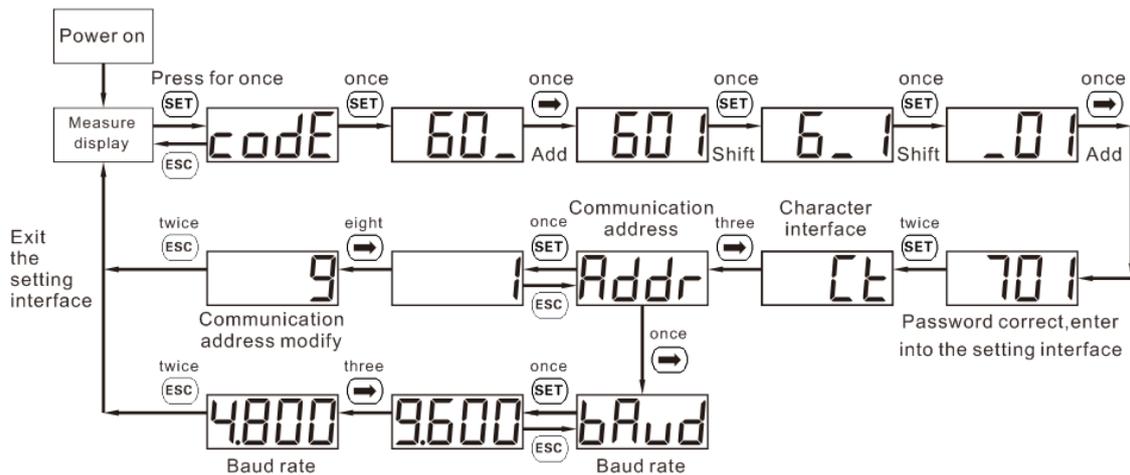

Figure 4 Setting examples for communication address and Baud Rate

When input digits, "⊞" can be used as cursor " – "motion button; "➡" is "add" button, "⎋"

"is Exit the programming operation interface or switch to the character interface from digit modification

interface, add from the beginning after setting the digit to the maximum value.

4.3. Communication function

　　Characterized with a RS485 communication interface, the baud rate can be changed between

1200bps, 2400bps, 4800bps and 9600bps. It conforms to DL/T645-2007<the communication

protocol of the multifunction energy meters> or ModBus-RTU protocol　requirements.

　　Factory default communication parameters is DL/T 645-2007 protocol, the default baud rate is

2400bps, with the calibration bit and stop bit to be E.1 and instrument address (please see instrument

factory number or crystal display screen).

Customized communication parameter is ModBus-RTU protocol, the baud rate is 9600bps, with the calibration bit and stop bit to be n.1, and the instrument address to be 1. The following table is the common ModBus protocol address table, can be asked for specified communication protocol by calling. ModBus_RTU protocol read command is 03H, write command is 10H.

Table 10 ModBus protocol address table

Parameter address	Parameter code	Instructions of parameters	Data type	Data length Word	Read Write
Keyboard parameters (specific parameters see the instructions of programming parameters, the actual value with (*) parameter＝ communication parameter value × 0.1）					
0000H	REV.	Version No.	16 bit with Signed char	1	R/W
0001H	UCode	Programming code codE(1～9999)	16 bit with	1	R/W
0002H	ClrE	Power reset CLr.E(1:energy clear)	Signed char	1	R/W
0003H	net	Network selection (0:three phase four wire,1:three phase three wire)	16 bit with	1	R/W
0006H	I r Ał	Current transformer rate IrAt(1～9999)	Signed char	1	R/W
0007H	U r Ał	Voltage transformer rate UrAt（＊） (1～9999 represents voltage ratio 0.1～999.9)	16 bit with	1	R/W
000AH	Disp	Rotating display time（s）	Signed char	1	R/W
000BH	B.LCD	Backlight time control（s）	16 bit with	1	R/W
000CH	Endian	Single-precision floating point size end mode (0:ABCD;1:CDAB;2:BADC;3:DCBA;)	Signed char	1	R/W
002CH	Protocol	Protocol switching (1:DL/T645-2007;2:n.2;5:n.1;6:E.1;7:o.1)	16 bit with	1	R/W
002DH	b Rud	Communication baud rate bAud (0:1200;1:2400;2:4800;3:9600;4:19200)	Signed char	1	R/W
002EH	Rddr	Communication address Addr(1～247)	16 bit with	1	R/W
Electricity data on the secondary side					
2000H	Uab		float	2	R
2002H	Ubc	Three phase line voltage data, Unit V(×0.1V)	float	2	R
2004H	Uca		float	2	R
2006H	Ua	Three phase phase voltage data, Unit V V(×0.1V)	float	2	R
2008H	Ub	(Invalid for three phase three phase)	float	2	R

200AH	Uc		float	2	R
200CH	Ia		float	2	R
200EH	Ib	Three phase current data, Unit A(×0.001A)	float	2	R
2010H	Ic		float	2	R
2012H	Pt	Combined active power, Unit W(×0.1W)	float	2	R
2014H	Pa	A phase active power, Unit W(×0.1W)	float	2	R
2016H	Pb	B phase active power, Unit W(×0.1W) (Invalid for three phase three phase)	float	2	R
2018H	Pc	C phase active power, Unit W(×0.1W)	float	2	R
201AH	Qt	Combined reactive power, Unit var(×0.1var)	float	2	R
201CH	Qa	A phase reactive power, Unit var(×0.1var)	float	2	R
201EH	Qb	B phase reactive power, Unit var(×0.1var) (Invalid for three phase three phase)	float	2	R
2020H	Qc	C phase reactive power, Unit var(×0.1var)	float	2	R
202AH	PFt	Combined power factor(positive number：inductive，negative number：capacitive) (×0.001)	float	2	R
202CH	PFa	A phase power factor(positive number：inductive，negative number：capacitive) (Invalid for three phase three phase) (×0.001)	float	2	R
202EH	PFb	B phase power factor(positive number：inductive，negative number：capacitive) (Invalid for three phase three phase) (×0.001)	float	2	R
2030H	PFc	C phase power factor(positive number：inductive，negative number：capacitive) (Invalid for three phase three phase) (×0.001)	float	2	R
2044H	Freq	Frequency, Unit Hz(×0.01Hz)	float	2	R
Power secondary side data					
101EH	ImpEp	（current）positive total active energy	float	2	R
1028H	ExpEp	（current）negative total active energy	float	2	R
1032H	Q1Eq	（current）Total reactive energy of the first quadrant	float	2	R
103CH	Q2Eq	（current）Total reactive energy of the second quadrant	float	2	R
1046H	Q3Eq	（current）Total reactive energy of the third quadrant	float	2	R

1050H	Q4Eq	（current）Total reactive energy of the fourth quadarant	float	2	R

Note 1：When the ratio of the voltage transformer is 1, the data of read voltage transformer ratio register UrAt is 10. When the ratio of voltage transformer is 1, ignore the above table(UrAt×0.1).

Note : Single-precision floating point adopts standard IEEE754 format, total 32 bit(4 word). The single-precision floating point mode is assumed to be 0, ABCD(high type in the front, low byte behind).

4.4. Energy measurement function

The horizontal axis of the measurement plane represents the current vector I (fixed on the horizontal axis), and the instantaneous voltage vector is used to represent the current power transmission. Compared with the current vector I, it has phase angleφ. The counter-clockwise direction φangle is positive.
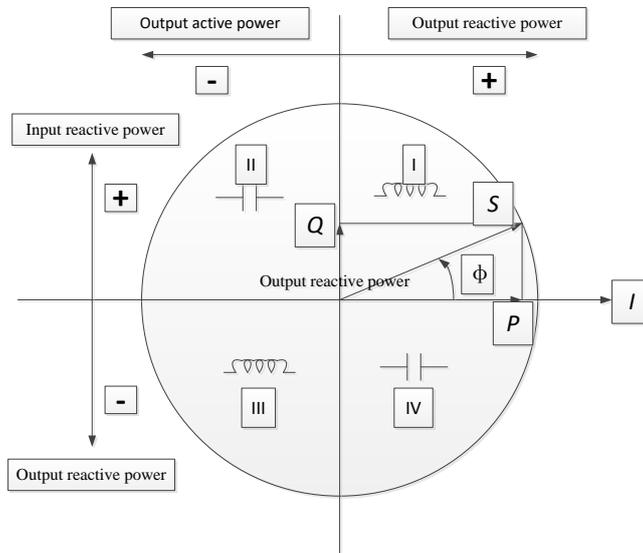

Figure 11 Measurement schematic diagram for energy four quadrants

5. Outline and installation size

6. Installation and operation manual

6.1. Inspection Tips

When unpacking the carton, if the shell has obvious signs caused by severe impact or falling, please contact with the supplier as soon as possible.

After the instrument being removed from the packing box, it should be placed on a flat and safe plane, facing up, not overlaying for more than five layers. If not installed or used in a short time, the electric meter shall be packed and placed to the original packing box for storage.

6.2. Installation and tips

6.2.1. Installation and Inspection

If the model No or configuration in the original packing box is not in accordance with the requirement, please contact with the supplier. While, if the inner package or shell has been damaged after removing the instrument from the packing box, please do not install, power on the instrument, please contact with the supplier as soon as possible, instead.

6.2.2. I nstallation

It requires experienced electrician or professional personnel to install it and you must read this operation manual. During the installation, if the shell has obvious damage or marks caused by violent impact or falling, please do not install it or power on and contact with the supplier as soon as possible.

7. Diagnosis, analysis and elimination for common faults

Fault phenomenon	Reason analysis	Elimination
No display when powered on	1、Incorrect wiring 2、Abnormal voltage for the instrument	1. If it is wrongly connected, please reconnect based on the right wiring mode (see the wiring diagram). 2. If the supplied voltage is abnormal, please choose the specified voltage. 3. If not the above problems, please contact with the local supplier.
Abnormal RS485 communication	1. RS485 communication cable is opened, short circuit or reversely connected. 2. Address, baud rate, data bit and check bit is not in accordance with the host computer. 3. The end of RS485 communication cable has not been matched with resistance (when the distance over than 100 meters) 4. Not matched with the communication protocol order of the host computer	1. If there is any problem with the communication cable, please change it. 2. Set the address, baud rate, data bit and check bit through buttons and confirm it is the same with the host computer, then set the operation to be "parameter settings". 3. If the communication distance is over than 100 meters, and the communication parameter settings are the same as the host computer, but cannot be communicated, then please lower the baud rate or add a resistance of 120Ω at the start terminal and ending

		terminal.
Abnormal data for the electrical parameter (voltage, current, power, etc.)	1. The transformer's ratio hasn't been set, and the instrument displays the secondary side data. 2. Wrong wiring.	1. If setting the transformer ratio, please set the voltage ratio and current ratio based on "parameter setting" 2. If wrongly connected, please connect the voltage and current of phase A, B and C to the wiring terminal of the instrument.
Abnormal data for the electrical parameter read by communication (voltage, current, power, etc.)	1. Data read by communication is secondary side data, without transformer ratio. 2. Wrong analysis for data frame	1. Multiply the data read by communication with the voltage ratio and current ratio. 2. Analyze the data frame based on the format of the communication protocol, please pay attention to the mode of the big and small end of data.

8. Transportation & Storage

When transporting and unpacking the products, please confirm they are not severely impacted, transporting and storing based on Transportation, basic environmental conditions and testing methods for instrument and meters of JB/T9329-1999.

The instrument and accessories shall be stored in the dry and ventilated places, to avoid humidity and corrosive gas erosion, with the limited environmental temperature for storage to be -40℃～+70℃ and relative humidity not exceeding 85%.

9. Maintenance & Service

We guarantee free reparation and change for the multi-meter if found any unconformity with the standard, under circumstance of that the users fully comply with this instructions and complete seal after delivery within 18 months.

Dear clients,

    Please assist us: when the product life is end, to protect our environment, please recycle the product or components, while for the materials that cannot be recycled, please also deal with it in a proper way. Really appreciate your cooperation and support.
